

Text Editor

- An HTML file is a text file, so to create an HTML file we can use any text editors.
- Text editors are the programs which allow editing in a written text, hence to create a web page we need to write our code in some text editor.
- There are various types of text editors available which you can directly download, but for a beginner, the best text editor is Notepad (Windows) or TextEdit (Mac).
- After learning the basics, you can easily use other professional text editors which are, **Notepad++**, **Sublime Text**, **Vim**, etc..

❖ Steps to write HTML code in Editor:

Step 1: Open any of the text editors of your choice. Here we are using the **notepad** text editor.

Step 2: Create new file: File->New File or Ctrl+N.

Step 3: Write HTML code in text editor.

Step 4: Save the file with a suitable name of your choice and a **.html** extension.

Step 5: Open the HTML page in your web browser.

To run the HTML page, you need to open the file location, where you have saved the file and then either double-click on file or click on open with option
